

This Release Notes announcement highlights new hardware updates.

## ST-600

We are introducing the new ST-600 Asset Tracker!

The ST-600 is a solar-powered asset tracking device with significantly reduced size and cost.

This solar-powered, asset-tracking device is ideal for enclosed trailers, storage containers, or other enclosed assets that are not powered regularly, where the device can be positioned on top of the asset and in full view of the sun. The ST-600 uses solar power to charge the battery.

For additional information, contact your Account Manager and visit the device page: [ST-600 Device Page](#).
