

This Product Release Notes announcement includes notification of updates for Mobile.

Introducing Assets

A new visualization of assets is available in the Manager App. Assets can now be viewed on the Map and in the Asset List section of the Map list. This allows for better organization and a simpler way to manage assets from the Manager App. With this new feature, you can:

- See all your assets in one place with clear details from the Asset List.
- Easily filter and find specific assets using Filter & Search functions.
- Check out your assets on the map for a quick geographical overview.
- See Trip History for Assets.

To learn more, please visit [Manager App: Working with the Map](#) and [Manager App: Filters](#).
